Light Symphony Solution

Light Symphony helped “Majestic Trees” create a beautiful customer retreat and show garden for their tree nursery in Hertfordshire, where visitors can now relax and deliberate their planting.

The garden’s location and size created a real challenge so owner, Steve McCurdy, invited designs from graduates of Capel Manor horticultural college. The elegant winning design was by Helen Thomas.

For the lighting, Steve enlisted Light Symphony and Extrelec’s help and we worked closely with Helen to specify an immaculate but impressive lighting solution using fittings sourced from John Cullen. Light Symphony allowed wireless control of the lighting and water feature, which avoided disruption to the newly finished office building. Customer demos are possible using the picture touch panel or iPad (via the WiFi base-station), while

timers guarantee energy efficiency by automatically switching the lights on at dusk and off outside of office hours.
